AB	The invention provides aq. soil treatment compns. comprising water and dissolved ionic water-sol. fertilizer in an amt. of .gtoreq.10 wt.% and dissolved water-sol. anionic polymer having .gtoreq.6 dL/g and ionic content .gtoreq.40 wt.%. Such concs. can have low viscosity and be pourable and be used as concs. for diln. in irrigation processes.

AB Title polymers comprise recurring polymeric subunits, preferably made up of vinylic and dicarboxylic monomers, such as vinyl acetate and/or vinyl alc. and maleic anhydride, itaconic anhydride and/or citraconic anhydride. The polymers are prepd. by free radical polymn. and then hydrolysis to replace ester groups with alc. groups. The polymers are complexed with ions and/or mixed with fertilizers or seed to yield agriculturally useful compns. Thus, 20 g maleic anhydride was mixed with 10 mL vinyl acetate and 2.4 mL di-tert-butylperoxide at .apprx. 70.degree. for 5 h, and hydrolyze in the presence of 18 g sodium hydroxide at 100.degree. for 2 h to give white-colored powder.

AB	The gels contain (A) 0.5-20 wt.% anionic water-sol. polymers selected from Na alginate, carboxymethyl starch (etherification degree 0.4-1.6), and carboxymethyl tamarind (etherification degree 0.4-1.6), (B) salts of Al, Mg, and/or Ca, and (C) 30-99.9 wt.% H ₂ O. The gels are (1) placed in containers having holes and buried in soils in the rhizospheres of cultivated plants, (2) placed on or mixed with the soils in the rhizospheres of the plants, or (3) dried, pulverized, placed in the rhizospheres of the plants, and sprayed with H ₂ O for water retention. The polymers are slowly biodegraded in soils for controlled release of water, and Mg and/or Ca released are absorbed by the plants as fertilizer components. An aq. soln. contg. 0.3 wt. part Ca(H ₂ PO ₄) ₂ was added to an aq. soln. contg. 0.5 wt. part Na alginate (Duck Algin S) to give a gel (H ₂ O content 99.2 wt.%) showing good water retention and shape retention.

AB	The soil is manufd. by (1) mixing dewatered cake of inorg. sludge with water-sol. polymers, (2) classifying the mixt., (3) adding soil amendments such as bark compost, leaf mold, peat moss, etc., and optionally fertilizers to the mixt., and then (4) curing the mixt. Lime-based solidifying agents and/or CaO may be added after the addn. of water-sol. polymers and neutralization of pH may be performed before the curing process by contacting with air. Dewatered cake obtained from flocculation process for quarry wastewater was kneaded with guar gum and the mixt. was sieved to remove .ltoreq.1 mm and .gtoreq.10 mm particles,. The sieved product was cured indoors for 7 days and then mixed with bark compost to give plant cultivation soil. The soil was further mixed with complex fertilizer and Ca superphosphate and used for cultivation of komatsuna.

AB A stable dispersion comprises insol. pesticide particles incorporated into a polymer coacervate shells. The coacervate is preferably formed from a sol. low mol.-wt. cationic polymer and a sol. high mol.-wt. anionic polymer. A soln. A comprised 120 g poly(iso-Bu acrylate) and 120 g chlorpyrifos in 520 g CH₂Cl₂, soln. B 168 g 20% poly(acrylamide-Na acrylate) in 600 g water, and soln. C 76 g 35% BC777 (cationic urea-formaldehyde resin) in 100 g water. Solns. C and A were added, under stirring to soln. B, to give an emulsion. CH₂Cl₂ was distd. off at 45.degree., under reduced pressure, to give a dispersion. The dispersion, was sprayed on cauliflower, to control the cabbage root fly.

AB Title polymers comprise recurring polymeric subunits, preferably made up
 of vinylic and dicarboxylic monomers, such as vinyl acetate and/or vinyl
 alc. and maleic anhydride, itaconic anhydride and/or citraconic anhydride.
 The polymers are prepd. by free radical polymn. and then hydrolysis to
 replace ester groups with alc. groups. The polymers are complexed with

ions and/or mixed with fertilizers or seed to yield agriculturally useful compns. Thus, 20 g maleic anhydride was mixed with 10 mL vinyl acetate and 2.4 mL di-tert-butylperoxide at .apprx. 70.degree. for 5 h, and hydrolyze in the presence of 18 g sodium hydroxide at 100.degree. for 2 h to give white-colored powder.

AB The gels contain (A) 0.5-20 wt.% **anionic water-sol. polymers** selected from Na alginate, carboxymethyl starch (etherification degree 0.4-1.6), and carboxymethyl tamarind (etherification degree 0.4-1.6), (B) salts of Al, Mg, and/or Ca, and (C) 30-99.9 wt.% H₂O. The gels are (1) placed in containers having holes and buried in soils in the rhizospheres of cultivated plants, (2) placed on or mixed with the soils in the rhizospheres of the plants, or (3) dried, pulverized, placed in the rhizospheres of the plants, and sprayed with H₂O for water retention. The polymers are slowly biodegraded in soils for controlled release of water, and Mg and/or Ca released are absorbed by the plants as fertilizer components. An aq. soln. contg. 0.3 wt. part Ca(H₂PO₄)₂ was added to an aq. soln. contg. 0.5 wt. part Na alginate (Duck Algin S) to give a gel (H₂O content 99.2 wt.%) showing good water retention and shape retention.

AB	An aq. compn. comprises a inorg. water-sol. compd. in an amt. of at least 10 % and an anti-drift agent which is a water sol. anionic polymer of intrinsic viscosity at least 6 dL/g, which is formed from a water-sol. monomer or monomer blend. The water-sol. polymer is present in an amt. up to 1.9 wt. % based on wt. of compn. The compn. can be a liq. fertilizer conc. that can conveniently be applied through conventional spray distribution equipment, without the need for addnl. dosing of anti-drift control chems. Said compn. (1) can be a low viscosity liq. anti-drift agent that can be combined with a herbicide or pesticide in conventional spray distribution equipment.

AB The soil is manufd. by (1) mixing dewatered cake of inorg. sludge with water-sol. polymers, (2) classifying the mixt., (3) adding soil amendments such as bark compost, leaf mold, peat moss, etc., and optionally fertilizers to the mixt., and then (4) curing the mixt. Lime-based solidifying agents and/or CaO may be added after the addn. of water-sol. polymers and neutralization of pH may be performed before the curing process by contacting with air. Dewatered cake obtained from flocculation process for quarry wastewater was kneaded with guar gum and the mixt. was sieved to remove .ltoreq.1 mm and .gtoreq.10 mm particles,. The sieved product was cured indoors for 7 days and then mixed with bark compost to give plant cultivation soil. The soil was further mixed with complex fertilizer and Ca superphosphate and used for cultivation of komatsuna.

AB The invention relates to water-sol. homopolymers and copolymers having an EbC50 value according to the algae toxicity test of *Scenedesmus subspicatus* of greater than 10 mg/L and are manufd. by treatment of the polymers prepd. from .gtoreq.1 of (meth)acrylate deriv. or (meth)acrylic acid with an ammonium salt and a water-sol. amine and then heat treated. The invention also relates to the use of these polymers as flocculation aids or thickeners and as a constituent of a plant protective agent or of an erosion protective agent.

AB The title compn., usable for profile-modifying and revegetating permeable soils, comprises a water-sol. polymer, a redox couple made of a water-sol. Fe(II) salt and an oxidizing agent, and agricultural nutrient. The compn. is mixed with water and applied to a subterranean or soil-surface formation, wherein Fe²⁺ is oxidized to Fe³⁺, to gel the polymer, making the subterranean or soil surface formation impermeable. A compn. was made of poly(acrylamide-acrylic acid) (90:10) 25, water 15, 10 % Fe(NH₄)₂(SO₄)₂ 5, 10 % NaClO₃ 5, and Nitroform 50 g.

NOVELTY - A composition comprising at least 10%, by weight, of an inorganic water-soluble compound, and upto 1.9%, by weight, of anti-drift agent, which is a **water soluble anionic polymer** with an intrinsic viscosity of at least 6dl/g, and formed from water soluble monomer or monomer blend, in a water solution, is new.
DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:
(1) a process for preparing the novel composition, where the **inorganic** compound is a **fertilizer** or herbicide

adjuvant, selected from ammonium nitrate, ammonium sulfate, monoammonium phosphate, diammonium phosphate, monopotassium phosphate, dipotassium phosphate, polyphosphate salts, potassium chloride, potassium sulfate, and calcium nitrate;

(2) a process of applying fertilizer to land or crops, comprising mixing the composition prepared in (1) with water, and spraying the mixture;

(3) a process of applying a herbicide or pesticide to land or crops, comprising mixing water a herbicide or pesticide, and the novel composition, and then spraying the mixture; and

(4) a method of improving the spray drift properties during fertilizer, herbicide or pesticide spraying, by combining the novel composition with water prior to spraying.

USE - The composition and methods are used for applying fertilizers, herbicides and pesticides to land or crops (claimed).

ADVANTAGE - The novel composition contains an anti-drift agent, preventing the formation of fine droplets which could be carried beyond the area intended to be treated.

PRAI GB 1998-16784 19980731

AN 2000-205697 [18] WPIX

AB WO 200008114 A UPAB: 20000412

NOVELTY - An aqueous soil treatment composition comprises water and, in solution, (A) at least 10 wt.% **ionic water-soluble fertilizer**, and (B) a **water-soluble anionic polymer** with an intrinsic viscosity of at least 6 dl/g and is formed from water-soluble monomer or monomer blend of which at least 40 wt.% is anionic monomer.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for: (a) a soil treatment process comprising irrigating an area of soil with water to which has been added an aqueous soil treatment composition as defined above; and (b) a method for the production of an aqueous soil treatment composition as above comprising providing an **aqueous solution of fertilizer** (A) and mixing with it polymer (B) in powder form.

USE - The aqueous soil treatment composition may be applied directly to soil as a fertilizer/soil conditioner composition but this composition is intended particularly as a concentrate for use in irrigation, especially for spray irrigation, where irrigation water is pumped to a spray manifold and sprayed over a very large crop area.

ADVANTAGE - The viscosity of the fertilizer solution is not increased to an inconvenient degree and the aqueous soil treatment composition can be processed using the equipment that is in place for processing of solution of fertilizer alone. The low viscosity of polymers in the composition means that they can be added without difficulty to the fertilizer solution at the fertilizer production plant. The prevention of excessive viscosity allows the compositions to be processed at the fertilizer production plant using conventional equipment.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A composition (1) comprising water, in solution,

a) an inorganic water-soluble compound in an amount of at least 10%,

b) an anti-drift agent which is a **water soluble anionic polymer** of intrinsic viscosity at least 6 dl/g which is formed from water soluble monomer or monomer blend,

characterized in that the water-soluble polymer (b) is present in an amount up to 1.9 wt. % based on weight of composition.

Said composition (1) can be a liquid fertilizer concentrate that can conveniently be applied through conventional spray distribution equipment without the need for additional dosing of anti-drift control chemicals. Said composition (1) can be a low viscosity liquid anti-drift agent that can be combined with a herbicide or pesticide in conventional spray distribution equipment.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A plant growth media in the form of a gel which is useful for growing plants in the form of seeds, seedlings, cuttings, nursery stock, etc., is obtained by dissolving a water-soluble polyisocyanate capped prepolymer containing said growing plant in an aqueous medium optionally containing various plant growth additives such as fertilizer, agricultural modified minerals and the like. The media can be formed in a variety of shapes.
